

Framr / ChronoSnap

STUDIO PLATFORM + SYNQ QUEUE

BOOTH PLAYBOOK

Photobooth + Brand Activation Team Playbook

Team briefing, customer workflow, run-of-show, task checklist, and comms & contingency plan — built around your real Framr Studio dashboard, ChronoSnap booth app, and SynQ queue system.

Monday Event · 27 July 2026 · Team of 2–5

Eagleies Creative — ChronoSnap / Framr Studio + SynQ · Internal event team document · Print or save to your phone

1 Team Briefing

The mission, in one line

Run a smooth, high-throughput photobooth that captures leads, drives shirt preorders, and leaves every visitor with a photo and a good impression of the brand.

Three goals, in priority order

#	Goal	Why it's ranked here
1	Every visitor leaves with a printed + digital photo	This is the hook that gets people to stop and gets them talking about the booth.
2	Convert traffic into shirt preorders	The photo is the reason they stop; the preorder is the reason it pays off.
3	Capture contact / lead data	Via the SynQ ticket and the preorder form, for follow-up after the event.

Roles (scale to whoever you have)

Role	Owner	Responsibility
Booth Lead / MC	_____	Owens the booth. Greets, hypes the crowd, manages the queue via SynQ, handles problems and decisions. The "face" of the booth.
Booth Operator	_____	Runs the ChronoSnap booth app: starts sessions, confirms QRIS payment, captures, prints, hands over the photo + download QR.
Sales / Preorder	_____	Pitches shirts while photos print. Takes preorders, sizes, and payment. Owns the preorder sheet/link.
Floater / Runner	_____	Restocks paper/props, manages crowd flow, covers breaks, runs supplies. In a 2-person team this role is shared.

If you only have 2 people: one runs the booth app (payment → capture → print), the other greets, manages the queue, and sells shirts while photos print. Rotate on breaks.

Key info everyone must memorize

Price points	Photobooth session = Rp _____ · Shirt preorder = Rp _____ (sizes/colors: _____)
Payment methods	Photos: QRIS via ChronoSnap (Xendit — also supports bank transfer, e-wallet, card). Shirts: _____
Wi-Fi / hotspot	_____ — critical: both the Framr Studio booth app and SynQ need a live connection to take payments and sync tickets.
Booth PIN	_____ (6-digit — locks the booth app settings; share only with the Operator, never with guests)
The pitch (memorize)	<i>"Free-ish moment, keepsake photo — and while it prints, grab our launch-price shirt, only at the booth today."</i>
Operating hours	Doors _____ to _____ · Setup by _____ · Teardown _____

2 Customer Workflow

The flow to rehearse until it's automatic. Two systems power this: **SynQ** manages the line, and the **ChronoSnap booth app** (built with Framr Studio) runs the photo session.

- 1 Greet** — Booth Lead greets the visitor at a standing sign/QR display. *"Want a free photo? Scan to join the line."*
- 2 Join the queue** **SYNQ**
Visitor scans the `/join` QR, picks "Photobooth," and gets a ticket number. They watch their live position on their phone at `/join/ticket/[id]` — freeing them to browse shirts instead of clustering at the booth. The `/display` board (tablet/TV at the booth) shows "Now Serving."
- 3 Wait = sell** — While they wait, Sales pitches the shirt preorder: show a sample, colors, launch price, take the preorder if interested.
- 4 Call next** **SYNQ**
Operator calls the next ticket from `/counter` — the number appears on `/display`. Visitor steps up to the booth.
- 5 Pay** **CHRONOSNAP**
Operator starts a session; the booth app shows a QRIS code and the visitor pays with their phone (Xendit-powered — also handles bank transfer, e-wallet, or card if configured).
- 6 Capture** **CHRONOSNAP**
Countdown, then multi-photo capture using the branded frame you designed in Framr Studio's Frame Builder. Booth Lead hypes and directs poses.
- 7 Print + digital copy** **CHRONOSNAP**
The photo prints on the spot; the app shows a download QR. Visitor scans for the digital copy, Operator hands over the print.
- 8 Last pitch + close** **SYNQ**
Sales: *"Loved the photo? The shirt's the same vibe — preorder before you go."* Operator marks the ticket finished in `/counter`. Booth resets for the next ticket.

Throughput target: ~2–3 minutes per session end-to-end. The SynQ queue is what keeps the line orderly and gives Sales a window to sell during the wait.

Pre-event app setup checklist (Framr Studio + ChronoSnap + SynQ)

- ☐ **Log in to the Framr Studio dashboard** (Chrome recommended) with the team email/password. Never share the login with guests; log out if using a shared laptop.
- ☐ **Booth Management** → **Create Booth**: set Name, Location, and Price (Rp). Note the auto-generated **Booth Code** (format ABCD - 1234) and, under Settings → App Security, set the 6-digit **Booth PIN** — write both down somewhere safe before you leave for the venue.
- ☐ **(Optional) Assign the booth to the responsible team member** under Booth → Settings → Assign to Member.
- ☐ **Frames** → **New Frame**: upload the branded frame image (PNG, transparent, required — a frame can't be saved without it). Pick a Canvas Preset that matches your printer paper (e.g. **4R Portrait 1200×1800** or **4R Landscape 1800×1200**), then use the Layers tab to add and position each photo slot (X/Y/Width/Height, rotation, capture order).
- ☐ **Set the frame Price and Assigned Booth** (and Assigned Session, if you're scoping it to today only) — a frame only appears on the booth app if it's correctly assigned. Click Save and confirm "Frame saved successfully."
- ☐ **If running a discount**: Booth → Vouchers tab → create and test the voucher code before doors open.
- ☐ **Check Device Status**: confirm the booth shows green (online), not gray, before you open.
- ☐ **Test the full loop for real**: one real small QRIS payment, one real print, one full SynQ ticket from scan to finish.
- ☐ **SynQ**: create the "Photobooth" service, set up 1 counter, generate and print the `/join` QR, open `/display` on a tablet, and make sure staff are logged into `/counter`. Confirm the first SynQ account created is the admin account.
- ☐ **Confirm both apps are on the event Wi-Fi/hotspot** — not just the venue's public network, which may block payment callbacks.

3 Run-of-Show Timeline

Adjust the anchor times to your actual event hours.

Time	Phase	Who	What
T-90 min	Load-in	All	Arrive, locate booth space, unload.
T-75	Physical setup	Floater + Lead	Table, backdrop, signage, power, lighting.
T-60	Tech setup	Operator	Boot the booth device, connect the printer, connect Wi-Fi, log into the Framr Studio dashboard and confirm the booth/frame are configured.
T-45	App config + test	Operator + Lead	Confirm Device Status is green, test a real small QRIS payment, test print, run one full SynQ ticket end-to-end.
T-30	Sales setup	Sales	Lay out shirt samples, preorder sheet/link, payment method, price cards.
T-20	Dry run	All	Run one full mock customer through the entire workflow. Fix anything broken.
T-10	Huddle	All	Confirm roles, price points, the pitch, break rotation. Team photo.
T-0	DOORS OPEN	All	Go live. Lead starts pulling people in.
Midpoint	Checkpoint	Lead	Restock paper, check preorder count vs. target, rotate breaks.
T-30 to close	Last call	Lead + Sales	"Last photos!" push. Final preorder pitch to everyone still in queue.
Close	Wind down	All	Stop accepting new SynQ tickets, serve the remaining line, stop sessions.
Post	Teardown	All	Power down, pack tech first, reconcile cash/preorders, count leads.

Pre-event (before Monday)

- ☐ Confirm booth location, size, power availability, table/chairs.
- ☐ Charge everything: booth device, tablet (for /display), phones, printer if battery-powered.
- ☐ Print: the /join QR (large), price cards, brand signage, shirt size chart.
- ☐ Framr Studio: booth created with correct name/location/price, Booth Code + PIN recorded, branded frame uploaded and correctly sized/positioned, frame assigned to the right booth and session.
- ☐ SynQ: service + counter + QR created, staff accounts made, admin confirmed.
- ☐ Shirt inventory: samples in each size, preorder form/link ready, payment method live.
- ☐ Supplies: **spare printer paper/ink**, extension cords, power strip, tape, scissors, markers, trash bag, cleaning wipes, water for the team.
- ☐ Cash float + change if taking cash for shirts.
- ☐ Confirm team arrival time and who brings what — assign each item an owner.

Day-of (setup)

- ☐ Table + backdrop + lighting up and stable.
- ☐ All tech powered, connected, and tested (payment + print + full queue flow).
- ☐ Device Status shows the booth online (green) in Framr Studio.
- ☐ Signage + QR visible from a distance.
- ☐ Shirt display + preorder station ready.
- ☐ Team huddle done, roles and pitch confirmed.

During the event

- ☐ Keep the queue moving in SynQ — never let the booth sit idle with a line.
- ☐ Restock paper before it runs out (check roughly every 30 minutes).
- ☐ Log every preorder immediately: size, color, contact, payment status.
- ☐ Watch the download-QR step — make sure people actually get their digital copy.
- ☐ Rotate breaks so no one burns out; the booth is never fully unstaffed.

Post-event

- ☐ Power down and pack tech first (most valuable/fragile).
- ☐ Reconcile: photo session count (Framr Studio Dashboard/Analytics), shirt preorder count + payments, cash.
- ☐ Export lead data from SynQ and the preorder list.
- ☐ Quick team debrief: what worked, what to fix next time.
- ☐ Send preorder confirmations / thank-yous to leads.

5 Comms & Contingency Plan

Communication

Primary channel	_____ (WhatsApp group / group chat) — for a 2–5 person booth this is enough; no radios needed.
Decision maker	Booth Lead has final say on the day. No debating in front of customers.
Key contacts	Event organizer: _____ · Venue/power contact: _____ · Team numbers: _____

Signal words (say out loud at the booth)

Signal	Meaning
"Paper!"	Printer paper is low — Floater restocks immediately.
"Line's building"	Queue is growing — Sales works the line harder, Operator speeds up.
"Break?"	Requesting a rotation — Lead approves and covers.

Contingency — what to do when things break

Problem	Immediate fix	Backup
Internet/Wi-Fi down	Switch to a pre-arranged phone hotspot.	Both the booth app and SynQ need a connection — if fully down, run a manual paper-number queue, collect payment another way, and send digital photos later.
Printer jam / out of paper	Floater clears the jam or swaps paper (keep spares!).	Offer digital-only via the download QR; note it and offer to print later, or comp the session.
QRIS payment fails	Retry; check the connection.	Take payment manually (cash/transfer) and run the session, or comp the photo to keep the line moving.
Booth app crashes / freezes	Restart the app — session data is saved server-side.	Have a backup device or phone-camera fallback ready; keep the line calm via SynQ.
Booth shows offline (gray) in Device Status	Check the booth device's internet connection and the Booth Code pairing.	Check Device Status for "last active" time to confirm when it dropped; reconnect and re-pair if needed.
Frame won't save / doesn't appear on the booth	Confirm the frame image is uploaded before hitting Save (it won't save without one).	Confirm the frame is assigned to the correct booth and session (not an old one).
Photo looks cropped / slot misaligned	Canvas size doesn't match the uploaded design — resize to match exactly.	Re-check slot X/Y/Width/Height in the Layers tab against the printed paper size.
Long queue / bottleneck	Cap the queue in SynQ and give people an honest wait estimate.	Add a "photos only, skip print" express option if you have a spare device.
Shirt runs out of a size	Take the preorder anyway — that's the point.	Log size, promise a fulfillment date, collect contact info.
Team member missing / sick	Lead reassigns roles into 2-person mode.	Priority order: keep the booth running > keep selling shirts > polish the queue experience.
Power loss	Find an alternate outlet or notify the venue/organizer.	Battery packs for tablet/phone; pause new sessions, keep selling shirts manually.

Golden rules

- Never leave the booth idle while there's a line — momentum is revenue.
- A happy visitor with a photo beats a perfect one. If something breaks, comp it and move on.
- Sell during the wait, not during the capture — the queue is your sales window.

- Everyone knows the price and the pitch. No "let me check" in front of a customer.

Fill in every _____ blank with your team before Monday. If a step here doesn't match what you see on screen, check the in-app **Support** menu in Framr Studio (Account → Support) for the current FAQ.
